A. Exact Maximin Lower-Envelope $\mu^*(7, N)$ vs. Horizon N
Minimum envelope $\min_{x\in[7,N]} A(x)\sqrt{(\ln x)/x}$
Finite horizon N ($x_0 = 7$)
Exact Maximin Sidon $\mu^*(7, N)$
Mian–Chowla Prefix $\min_{x\in[7,N]} \Phi_{\mathrm{MC}}(x)$
B. Pointwise Envelope $\Phi_A(x)$ on $[7, 32]$
Normalized ratio $\Phi_A(x) = A(x)\sqrt{(\ln x)/x}$
Coordinate $x \in [7, 32]$
Maximin Witness $A^* = \{1, 2, 5, 7, 14, 22, 32\}$
Mian–Chowla [32] ($A = \{1, 2, 4, 8, 13, 21, 31\}$)
Maximin floor $\mu^*(7, 32) = 1.77676$ (at $x^* = 13$)
